## QUMEA APPOINTS ELAD BENJAMIN AS CHAIRMAN OF THE BOARD

*Solothurn, 26 May 2026 – QUMEA today announces the appointment of Elad Benjamin as Chairman of the Board. Benjamin brings more than 25 years of experience in healthcare technology, enterprise software, and AI-driven medical solutions to support QUMEA's next phase of growth.*

Benjamin co-founded Zebra Medical Vision, one of the first companies to apply artificial intelligence to radiology imaging. He scaled the organisation to close to 100 people across multiple funding rounds before its acquisition by Nanox in 2021. He has also held senior general management and vice-president roles at Carestream Health and Lumenis, and currently leads AI Innovation globally at Philips, giving him deep first-hand understanding of the competitive landscape, technology trends, and customer environment in which QUMEA operates.

He joins the board in an independent capacity, with clear boundaries towards Philips in place in line with governance best practice. Benjamin experience spans growth and leadership across multiple European markets and beyond, where he has built a remarkable network across the healthcare landscape. Those who have worked closely with him describe a leader who challenges constructively, empowers those around him, and brings clarity and calm at exactly the moments it matters most.

With his deep familiarity with investor-backed growth settings, Benjamin has advised and sat on the boards of multiple healthcare software companies. It speaks to the strength of QUMEA's growth trajectory that we are able to attract exceptional industry talent like Elad to the Chair role. His outside-in perspective and experience will accelerate our momentum and help solidify QUMEA's future.

### ABOUT QUMEA

QUMEA is the foresight engine for care. We build high-precision, radar-based monitoring systems that continuously capture movement data and translate it into actionable clinical intelligence, without cameras, without wearables, and without compromising patient dignity. Our proprietary AI detects subtle changes in movement patterns before they become critical events, giving care teams the foresight to act with confidence. In acute care, an average reduction in falls of

74% has been achieved. This sets a new standard in proactive and preventative patient care.

Over 150 leading institutions, including the Hirslanden Group, Felix Platter University Geriatric Medicine Basel, Hanover Medical School, Balgrist University Hospital and Schulthess Clinic Zurich, already rely on QUMEA's solution.

QUMEA operates from Solothurn (CH), Stockholm (SW) and Mannheim (DE) and has a team of sixty experts.
