QUMEA celebrates Landspítali in Iceland as its 100th hospital

Solothurn, November 21, 2024 - Swiss digital health scale-up QUMEA has gained its 100th hospital with Landspítali, Iceland's national university hospital, in August of this year. Finally, long-overdue festivities to celebrate and honor the entire team of the Landspítali cardiology ward led a delegation of QUMEA to travel to Iceland.

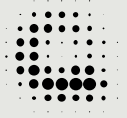

Since implementing QUMEA's radar-based digital mobility monitoring system in the cardiology ward, Landspítali has seen significant improvements in patient care and staff wellbeing. Project Manager Hulda Margrét Valgarsdóttir, the entire team of ward Hjartadeild 14 E/G and the whole project team at Landspítali were deeply honored and delighted to receive this prestigious recognition.

"It has been an absolute pleasure working with everyone from the Landspítali cardiology ward so far. I am deeply impressed by how forward-thinking they are with this technology, seamlessly integrating it into their daily work in a highly individualized way." says Sokol Balaj, Customer Success Manager and project leader for QUMEA. "Their strong affinity for innovation and profound commitment to patient safety are remarkable — they truly see and understand the bigger picture. The collaboration has been incredibly constructive and visionary. I look forward to continuing this precious partnership, fueled by their unparalleled enthusiasm and dedication."

The AI-driven mobility monitoring system provides the care team with valuable insights into patients' movements and behaviors, including restlessness and activity levels throughout the day and night. This information has proven invaluable, allowing the staff to better understand each patient's overall condition. The insights have contributed to enhanced treatment plans and improved outcomes, boosting safety across the ward.

"We're thrilled to expand our reach as far north as possible, and we couldn't ask for a better partner than Landspítali." says Cyrill Gyger, CEO and co-founder of QUMEA. "The collaboration with everyone involved has been exceptional. It's truly impressive to see how committed and exemplary the team at Landspítali is in addressing the critical topic of patient safety. Their dedication, combined with the strategic support of technology, enhanced their capabilities significantly. This is the goal we commonly share with relieving technology."

QUMEA's system is fully anonymous, using no cameras and processing no personal data, making it a privacy-forward solution for healthcare facilities of the future. As

QUMEA continues to expand, it remains committed to supporting healthcare providers with innovative, effective, and privacy-respecting solutions designed to make healthcare safer and more efficient across Europe.

ABOUT QUMEA

QUMEA is the market leader for digital mobility monitoring in patient rooms. The system captures anonymous radar-based movement data, evaluates it, visualizes it and automatically provides information about dangerous situations. Patient privacy is protected as no cameras or microphones are used. In acute care, an average reduction in falls of 74% has been achieved. This sets a new standard in proactive and preventative patient care.

Over 100 leading institutions, including the Hirslanden Group, University Geriatric Medicine Felix Platter Basel, Hanover Medical School, Balgrist University Hospital and Schulthess Clinic Zurich, already rely on QUMEA's solution. QUMEA operates from Solothurn (CH), Stockholm (SW) and Mannheim (DE) and has a team of forty experts.
